# Modern shipping relies on Global Communication

MARITEX

# With Maritex Global Radio Telex you never lose co

Maritex has brought new dimensions to Radio Telex. By linking land-based equipment in Panama, the Philippines and Scandinavia, it is now possible to provide a *24 hour Global Coverage.*

Maritex links shore to ship and ship to shore. The heart of the system is the Central Computer System in Sweden. Here all network resources and message switching activities are controlled and coordinated.

Maritex is operated with a high-technology dual computer configuration. This ensures maximum security and uninterrupted access.

Maritex Operations Centre provides that vital personal service needed in a high-tech computer system. Once registered as a client, you can receive manual back-up and take advantage of the centre's long-standing contacts with suppliers of hardware to get help and advice on a totally unbiased basis.

Maritex Shore-to-Ship Service gives you 24 hours of unmanned automatic message reception on board, and if you wish, automatic delivery confirmation back to your office.

ntact with land wherever you are on the seven seas

Maritex Ship-to-Shore Service offers you Direct Dialling with conversation options, Rational Store and Forward, Multiple Address Telex and, our latest invention, Semi-Fax.

Join the growing group of shipowners who use Maritex
Get into contact through **Maritex,** the easy way. Dial the ship's telex number from anywhere in the world, using standard telex procedures. **Maritex** routes your message via one of the linked land stations for fast automatic delivery on board.

Rational operation and management calls for Maritex
Economy is the key to success in shipping as elsewhere in business. **Maritex** offers a solution to the communication problem with maximum performance and very competitive traffic rates, compared with present systems available.

Your guarantee for reliability lies with us
Maritex is jointly owned by the Telecom companies in the five countries, Denmark, Finland, Iceland, Norway and Sweden. That is your insurance for stability, continuity, constant network development and financial capacity.

No entrance fee - It is simple to join Maritex!

This is how you do it:

Any ship, regardless of nationality, equipped with **Maritex** compatible equipment, can join the **Maritex** System. You provide the basic facts about the ship and a registration address.

We assign your ship an individual telex number and carry out a simple commissioning test. Then you are ready to start communicating! There are no entrance or annual fees to pay – just the ordinary communication charges.

What do you need on board to join Maritex?

A ship's terminal, basically consisting of an auto-tuned transmitter, a scanning receiver and a radio telex modem approved for use in **Maritex**. Many ships today are equipped with a terminal system as described and most terminals on the market are, although not specifically designed for it, compatible with **Maritex**. Full economical and operational advantages can be taken of the investments made in these terminals only by joining **Maritex.**
